## EDUCATION

---

### University of California Irvine

Sep 2024 – 2029(Expected)

Ph.D. in Computer Science.

**Research Interest:** Machine Learning, Bioinformatics (Multi-Omics, DNA, RNA), Artificial Intelligence for Science (Generative Model, Molecular Optimization, LLM for Science), Computer Vision, Multi-Model Learning.

### University of Illinois Urbana-Champaign

Aug 2022 - Dec 2023

Master's Degree in Computer Engineering, GPA: 3.8/4.0. Research Scientist at [AI@UIUC](mailto:AI@UIUC).

**Core Courses:** Distributed Systems, Communication Network(A+), Computer Vision(A), Advanced Distributed Systems, Transfer Learning(A), Engineering Entrepreneurship(A+), Machine Learning(A), Applied Parallel Programming.

### University of Michigan - Shanghai Jiao Tong University Joint Institute

Sep 2018 - Aug 2022

Bachelor's Degree in Electrical and Computer Engineering. Minor in Data Science. **Outstanding Graduate (School Level).**

**Core Courses:** Data structures and Algorithms, Intro to Computer Organization (A, Teaching Assistant), Computational Methods for Statistics and Data Science (A+), Intro to Operating Systems, Intro to Data Science (A), Undergraduate Research (A+).

## RESEARCH EXPERIENCE

---

### Adapting Large Language Models for Biomedical Lay Summarization

Apr 2024-June 2024

- Fine-tuned LLama3 using Low-Rank Adaptation (LoRA) and optimized model performance, achieving a 68.8% improvement in the LENS readability score, leading to the first place in readability at the 2024 BioLaySumm workshop.
- Implemented K-shot prompting based on semantic similarity, enhancing factuality scores by 15.0% (AlignScore) and 7.9% (SummaC) through the integration of contextually relevant examples, leading to more accurate and relevant summaries.
- Developed techniques to resolve repeated word issues post-fine-tuning, resulting in a 12% increase in coherence and conciseness of the generated summaries.

### Molecular de-novo design through Decision Transformer and Oracle-feedback reinforcement learning

May 2023-May 2024

Advisor: Tianfan Fu(Assistant Professor at Rensselaer Polytechnic Institute), Jimeng Sun(Professor at CS, UIUC)

- Implemented a decision transformer architecture to improve the AUC for over fifteen molecular optimization tasks for 5% each on average.
- Applied Oracle-feedback reinforcement learning on the downstream tasks to reach higher performance than pretrained model.
- Carried out ablation study and investigation into loss curve and conditional probability over the next token as a function of previously chosen ones according to the model.

## Hardware-aware Latency Predictable, Differentiable Search for Faster Config and Convergence of Distributed ML Pipeline

Parallelism Advisor: Indranil Gupta, Professor of CS UIUC | Advanced Distributed Systems | Researcher | Feb 2023 – May, 2023

- Implemented a predictive model that considers communication cost, model computational cost, and hardware information to predict latency and resources of parallel configurations, saving time on pre-profiling before searching the parallel configuration.
- Proposed a differentiable parallel configuration search space inspired by DARTS, can potentially reach optimal configuration faster than the original dynamic programming.
- Employed parallel random initialization using sampling algorithms like Bayesian Optimization for faster train loss convergence.

## Multi-modal target detection with zero-shot depth estimation, Multi-modal NAS

May 2022 – Sep, 2022

Shanghai AI Lab | Intelligent Photoelectric Department | Multi-modal Cognitive Computing Algorithm Intern

- Literature review on nature/science papers on multi-modal learning, and conference papers on Neural Architecture Search, multi-modal learning, image and sound feature fusion.
- The model inputs image and 2 audio channels, and outputs the behavior category and distance. Improve the estimation of distance using zero-shot monocular depth estimation like MiDaS added to the model structure.

## Methylation Multi-task Learning for Autoimmune Disease Diagnosis Using Biological Graph Informed Networks

Research Assistant Sep 2021 – Dec, 2023

Advisor: Hongyi Xin, Associate Professor of UM-SJTU Joint Institute, Shanghai Jiao Tong University

- Explored adaptable and interpretable neural network to find common genotype given 480k dimension sites, hundreds of sample.
- Designed an explainable site-gene-pathway ontology constraint to NN to discover new biomarkers by checking weights.
- Implemented a Variational Auto-Encoder to support gene-level embedding shared among datasets to obtain multi-task learning.
- Optimized a pretrain-finetune training scheme to increase accuracy by over 10%, wrote the paper under review.

## Augmented reality simulation of cardiovascular interventional surgery | Research Assistant

Mar 2020 - May 2021

Advisor: Lixu Gu, Professor of Biomedical Engineering, Shanghai Jiao Tong University

- Developed the framework of an augmented reality surgery training assistant system for medical student and surgery.
- Predicted the operation trajectory using LSTM and used KD-Tree to calculate the distance for operation safety warning.
- Displayed vascular model in AR with OpenGL and designed the UI interface to support translation.
- Used the aruco library in OpenCV to coordinate positioning of the QR code.
- Published *Vascular Intervention Training System Based on Electromagnetic Tracking Technology* on ICVRV as second author.

## Normal fundus image generation based on Generative Adversarial Network | Research Assistant

Apr 2019 - Oct 2019

Advisor: Lisheng Wang, Professor at SEIEE, Shanghai Jiao Tong University

- Utilized GAN to design an image generation system to generate normal fundus image for comparisons to identify lesion areas.
- Used datasets including MESSIDOR-2 for data preprocessing like normalization, contrast enhancement, de-noising, clipping.
- Implemented a U-Net-based segmentation network to identify and remove fundus blood vessels as part of de-noising process.
- Built a CycleGAN framework based on segmentation to generate the normal fundus image to identify the lesion area.

## PROFESSIONAL EXPERIENCE

XtalPi Inc (QuantumPharm Inc) | XAB-Antibody IDD | Research Scientist Intern |

Aug 2024 – Present

- Antibody Binding Affinity prediction ai model design. Reproduce the train code for binding-ddg-predictor, GearBind. Data visualization for skempi dataset. Split the dataset to make complex in the same fold to avoid dataset leakage. Comparing focal loss based on mutation, weighted MSE and weighted BCE, balanced sampling, differentiable ranking methods.
- Designed a balanced sampling method applied on bingind-ddg-predictor to sample the mutation with A and non-A at the same rate. Improved the Pearson by around 10%, spearman by around 5%.

**Amazon Web Services** | VMware Cloud on AWS (Brio) | Software Engineer Intern | Seattle, Washington May 2023 – Aug 2023

- Designed UI to automate the workflow to update Rate Card for Brio resource console using React, TypeScript and JavaScript.
- Integrated UI with backend API using Java, API Gateway and Amazon Lambda. Supported validation and creating and updating rate cards through csv. Preview visualizes modifications and identifies pricing errors. (5k+ lines of code in total)
- Designed anomaly detection algorithms for disbursement generator to identify usage spikes or subscription anomalies using Java, SQL, Amazon Athena, S3 Buckets, DynamoDB Table. Utilized CloudWatch to create tickets and alarms to engineers.

**4Paradigm Co., Ltd** | **OpenMLDB** | GitLink Code Camp 2022 | Open-Source Developer | Shanghai

July 2022 – Oct 2022

- Developed an automated feature engineering pipeline, including feature generation and selection, based on AutoX and OpenMLDB sql with Python (600+ lines of code). See pull request: <https://github.com/4paradigm/OpenMLDB/pull/2381>.

- Saving data scientists in dozens of companies' weeks of time by automatic feature selection pipeline.
- The data is transformed by OpenMLDB sql to get time series and statistics features, and then we select the most important K features based on some algorithms like Adversarial Validation, GRN feature selection or Reinforcement Learning.

**Intel Co., Ltd** | DL Model Optimization Department | Deep Learning Software Engineer Intern | Shanghai Nov 2021 - June 2022

- Implemented new features to Intel® Neural Compressor, Cross Layer Equalization, a data free quantization to rescale different layers' weight range to reduce over 5% in the drop in accuracy after quantization like FP32 to INT8, and edited documents.
- Studied the open-source software like Nvidia Triton Inference Server (around 70k lines of code) and AI Model Efficiency Tool and gave presentations to around 100 colleagues in whole department to introduce the design and technique detail of them.
- Cooperated to design and implement class of AI inference server software by C++, which enables the team to deploy trained AI models from multiple frameworks and deploy more models on GPU or CPU based infrastructure to simplify AI inferencing.

**ShuKun Technology Co., Ltd** | R & D Department | Algorithm Intern | Shanghai Dec 2020 - Apr 2021

- Implemented multi-node and multi-GPU training with horovod framework, NVIDIA clara train sdk, OpenMPI, and NCCL2, 4GPU (2 nodes each 2GPU) can reach 2.5x speed up compared to 1GPU (Discovered that communication is bottleneck).
- Compared the efficiencies of models like 3D-UNet when multi-node training with different GPU configurations in Python and wrote the training process documents, saving algorithm scientists days in each training job (~0.65n times faster with n nodes).
- Used Java to add multi-machine and multi-GPU training functions to the company's back-end web page for algorithm scientists.

## TEACHING EXPERIENCE

**VE370 Intro to Computer Organizations** | Professor: Gang Zheng | Teaching Assistant Sep 2021 – Dec 2021

## COURSE PROJECTS

**CS 425 Distributed Systems:** Distributed ML Inference System (C++ and Python) (100/100) Aug 2022 – Dec 2022

- Implemented scheduling algorithm to obtain fair-time inference, making each ML job query rate within 20% difference.
- Design a distributed file system to maintain datasets with SWIM-like membership protocol (nearly 1e-2 false positive rate).
- Supported fault-tolerance and can recover when N members and coordinator leave or fail. Leader re-election is within 10s.

**CS 543 Computer Vision (A):** (Python) Aug 2022 – Dec 2022

- Channel Alignment: Designed multi-scale algorithm to align 3 channels of images, evaluating with NCC and Fourier Transform.
- Laplacian Blob Detection: Implemented a scale-space blob detection with a Laplacian scale space using Laplacian of Gaussian filter and performed non-maximum suppression in scale space.
- Stitching: Stitching pairs of images using OpenCV, SIFT descriptors and RANSAC to estimate homography mapping of images.
- 3D Shape from shading: Estimate the albedo and surface normal and compute the surface height map by integration to reconstruct 3D surface from image of shading.

**CS 438 Communication Network (A+):** TCP Protocol (C++) Aug 2022 – Dec 2022

- Implemented transport protocol with properties equivalent to TCP based on unreliable UDP, which can tolerate packet drops, allow other concurrent connections fair chance (0.5x to 2x of TCP), doesn't give up entire bandwidth to other connections.

**Sonar detection water pipe state system based on machine vision and neural network compression** Sep 2021 – Dec 2021

ECE4710 Advanced Embedded Systems (MDE, Thesis). | Instructor: Zou An, Assistant Professor of UM-SJTU Joint Institute

- Processed the source data of sonar as a matrix and use Python to generate polar images in real time.
- Used OpenCV to perform subtraction and corrosion operations to complete hole or bulge detection.
- Designed a compressed and binarized YOLO architecture to realize defect area detection with accuracy 99%.
- Used HLS to deploy to FPGA, matrix parallel operation, real-time embedded system is implemented.

## HONORS & AWARDS

2022 Shanghai Jiao Tong University Outstanding Graduate (School Level) Aug 2022

2021 Microsoft Imagine Cup Global Competition - Third Prize in China Jan 2021

2020 Mathematical Contest in Modeling - Meritorious Winner (Top 6%) Apr 2020

2020 "Jidong Cup" CCVR China Virtual Reality Competition, Product Creative Group - Second Prize Nov 2020

2018-2019 and 2020-2021 Academic Year Undergraduate Excellence Scholarship Nov 2019/2021

## SKILLS

- **Programming:** C/C++(Proficient), Python (Proficient), MATLAB, R, Verilog, Java, RISC-V Assembly, SQL, Shell, TypeScript, CUDA Programming.
- **Frameworks & Libraries:** PyTorch, TensorFlow, horovod, Keras, Sk-learn, Pandas, NumPy, OpenCV, Matplotlib, Selenium.

➤ **Developer Tools:** Docker, Git, LaTeX, PSpice, Linux.
